

Examen 2

CI3641 – Lenguajes de Programación I

Enero–Marzo 2022

Estudiante: Gregory Muñoz

Carnet: 16-11313

Constantes:

$X = 3$

$Y = 1$

$Z = 3$

Enlace de github donde se encontrarán los programas:

Respuesta 3.b.ii:

El iterador misterio se apoya en el iterador `ins` para obtener todas las permutaciones de los elementos de un arreglo. Para este ejemplo es aprovechado el uso del iterador `ins` de manera que no se repita alguna permutación, para ello `ins` es llamado en una ocasión de esta manera: `for i in ins(1, [2,3])` y también `for i in ins(1, [3,2])`, así para la primera retorna `[1,2,3]`, `[2,1,3]`, `[2,3,1]` y para la segunda retorna `[1,3,2]`, `[3,1,2]`, `[3,2,1]` siendo estas seis todas las permutaciones de `[1,2,3]`.

Respuesta 3.b.iii:

En el repositorio.

Respuesta 4: -Código en el repositorio
 -Análisis y Conclusiones:

#----- Comparando solo Recursion, Recursion de Cola e Iterativo -----#
En el gráfico los tiempos de Recursión de cola es solapado por el iterativo pero sí está presente.

Ingrese el número final de n: 200

Ingrese el número pasos desde 0 hasta 200: 10

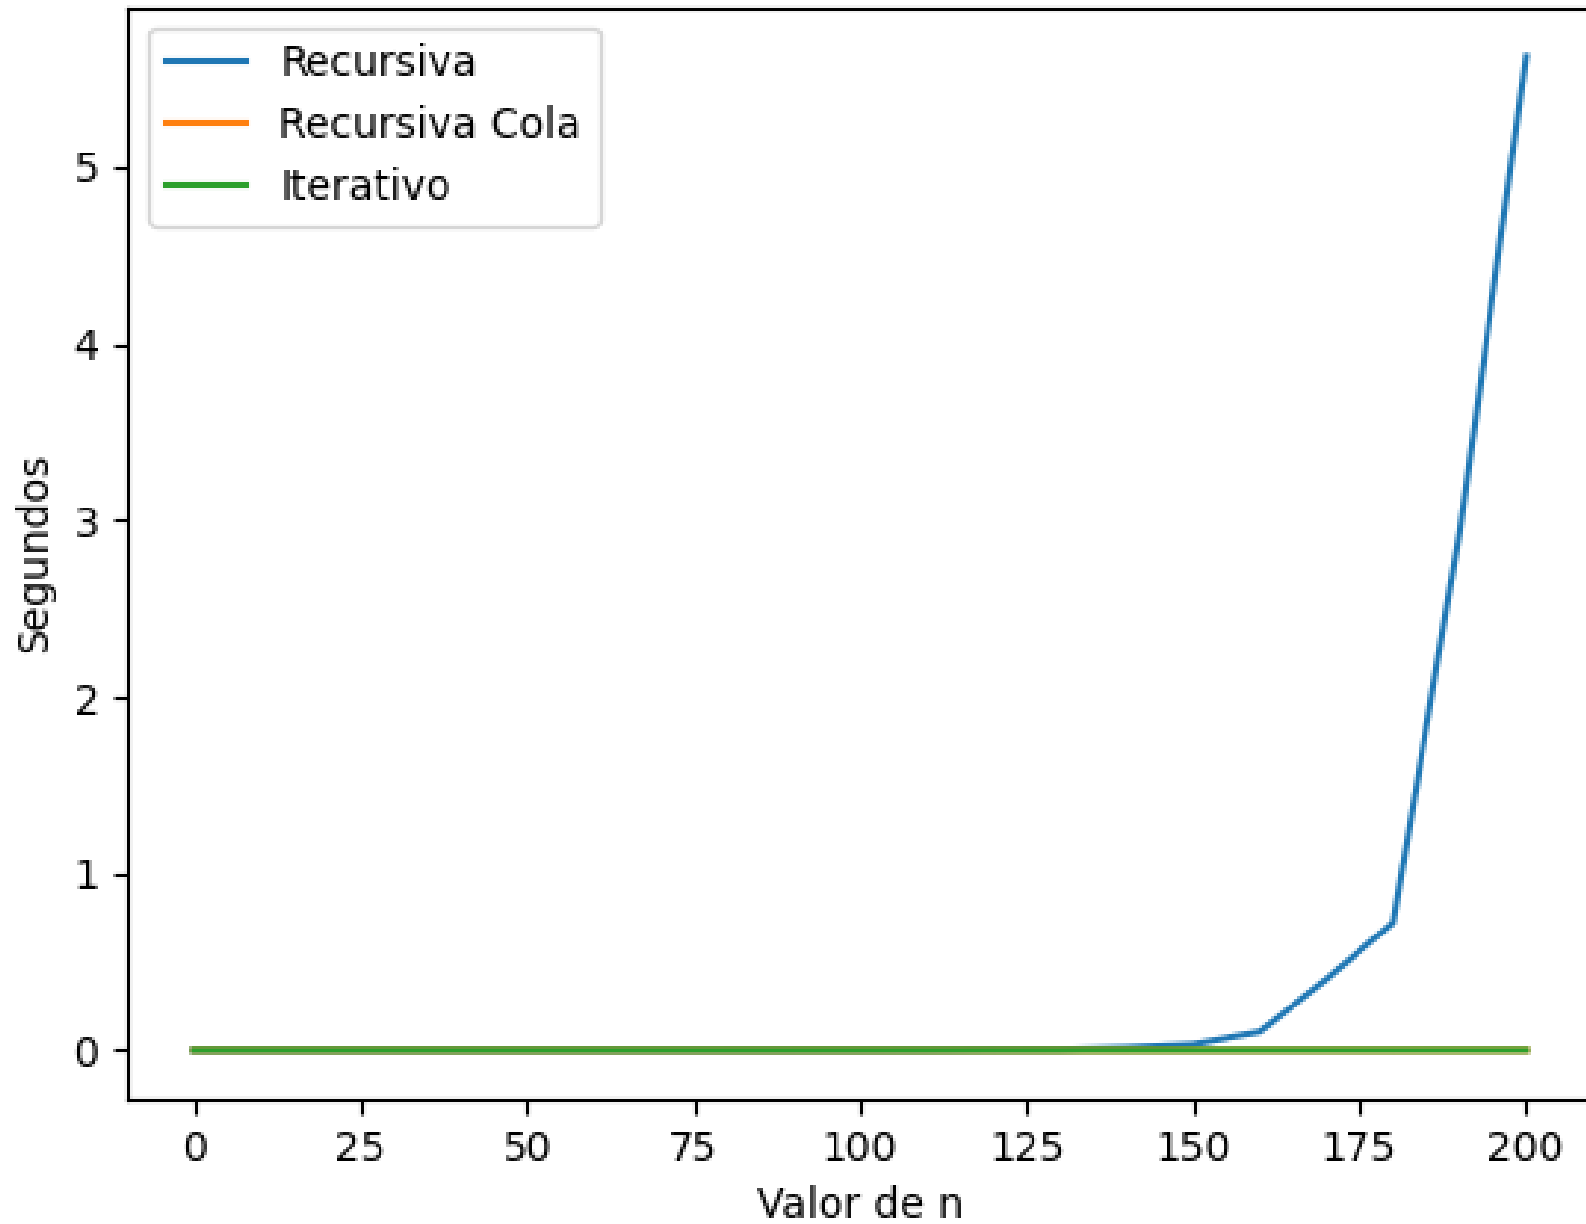

Resultados de la ejecución:

n	Recursiva	Recursiva Cola	Iterativo
0	0	0	0
10	10	10	10
20	20	20	20
30	30	30	30

Tiempos de resultados de la ejecucion

#----- Conclusiones -----#

La implementación Recursiva es menos eficiente. Se probó con un valor de $n = 300$ y no hubo respuesta transcurridos 10 minutos. A su vez, se observa en los resultados y en el gráfico, que es la menos eficiente en tiempo ya que para el valor de $n = 200$ obtuvo un tiempo de 5.62845 segundos, es un *14071.125 en el tiempo de la recursión de cola (0.00040 segundos) y *22513.8 el tiempo de la iterativa (0.00025 segundos).

La implementación Recursiva de cola con un valor de n mayor que 1000 arroja el error: RecursionError: maximum recursion depth exceeded in comparison. Se debe a que se excedió el nivel de recursividad y por ende no se puede comprar con valores de n superiores a 1000. Por los resultados obtenidos en la comparación con la implementación Iterativa se puede observar que la implementación Recursiva de cola es menos eficiente pero solo por muy poco. Para $n = 500$ se observa que el tiempo de la Recursión de Cola es de 0.00091 segundos y el tiempo de la Iterativa es de 0.00060 segundos. La diferencia entre los tiempos es de 0.00030 segundos, siendo el tiempo de la Recursión de Cola un *1.51667 de el tiempo de la Iterativa. Para $n = 1000$ se observa que el tiempo de la Recursión de Cola es de 0.00300 segundos y el tiempo de la Iterativa es de 0.00197 segundos. La diferencia entre los tiempos es de 0.00103 segundos, siendo el tiempo de la Recursión de Cola un *1.52284 de el tiempo de la Iterativa.

Finalmente se observa que la implementación Iterativa es la más eficiente en tiempo alcanzando un tiempo de 0.00179 segundos para $n = 2000$. Y sin tener limitante para el valor de n .

Respuesta 6.a y 6.b: Con A = 11 , B = 11, C = 5
